SUPPLEMENT TO
REPORT NO.

THIS IS UNEVALUATED INFORMATION

1. The planned expansion of the Fuel and Industry Planning Office (Kraftstoff und Industrie Entwurf) in Wildau and Marzahn has been dropped. Wildau is occupied with heavy machine construction and Marzahn with machine tool production. The planned Wildau expansion was to have been in the former Hasse and Wrode firm. The project was abandoned because of a lack of construction material; especially lacking is profile steel for the construction of shop buildings. The construction material which is already available is to be used for the building of airfields and casernes.
2. The hydrogenation equipment now being built for Hungary in the DDR is to be used in connection with the power supply equipment now being built at Bergmann-Borsig, Berlin-Wilhelmsruh. The Bergmann-Borsig equipment, reportedly a 40,000 kilowatt installation, is an integral part of the hydrogenation equipment being built under the supervision of the specially-established Hungarian office in the Fuel and Industry Planning Office.
3. The Fuel and Industry Planning Office includes the Konstruktions-Projektions- und Montagebüro, Leipzig; it is now a VtB. The personnel is to be increased by between 200 and 500 employees. At the moment, the number of workers is not over 150. The office is finding it difficult to find competent trained specialists.
4. It is noteworthy that the staff does not pay much attention to the SED. Twenty employees at first took part in the DDR third anniversary parade; the number dwindled to three and then these departed so that the office was finally not represented at all in the review.
